

Introduction to the WINS Academy Foundation Module

 6th June, 2019
 13th June, 2019
 27th June, 2019

WEBINAR OVERVIEW

Please join us for this introductory webinar on commencing and completing the WINS Academy Certification Programme, beginning with the WINS Academy Foundation Module.

The Foundation Module provides an introduction to the nuclear industry and nuclear security for those learners who do not have experience in this area and is a refresher for those that do.

It describes the changing threat environment experienced around the world and summarises international efforts to enhance nuclear security, globally.

It explores the roles of different national stakeholders and the importance of clearly defined responsibilities and interface arrangements to reduce the likelihood of an incident involving nuclear or other radioactive materials.

The module also highlights the importance of effective communication with stakeholders, including employees, and explains how current developments in international governance and assurance are relevant to nuclear security.

WEBINAR DATES

The webinar will be offered on three dates and times for the convenience of WINS Academy participants across the world.

June 6 at 16:00 hours GMT – [click to register](#)
June 13 at 06:00 hours GMT – [click to register](#)
June 27 at 19:00 hours GMT – [click to register](#)

AGENDA

- Welcome from Daniel Johnson, Senior Adviser at WINS
- Getting started with the Foundation Module
- Overview of your member profile
- Logging into your account and accessing the Foundation Module
- Navigating the course content
- Introduction to the WINS Academy Foundation Module
- Review of the quizzes
- Completing the self-assessment
- Review of the process for booking your certification exam
- Q&A session

TARGET AUDIENCE

The webinar is designed for registered WINS Academy participants who have not yet completed the Foundation Module.

ABOUT THE WINS ACADEMY

The WINS Academy is the first certified online programme in the world specifically designed to support the professional development of personnel with accountabilities for nuclear security. It has been designed to encourage the widest range of stakeholders in as many countries as possible to develop their knowledge and competence to manage the security of nuclear and other radioactive materials. The objective is to set out the best practices that have been identified for nuclear security management, enabling course participants to decide if and how to apply them in their local context to improve security effectiveness.

After you have successfully completed the programme, we look forward to welcoming you to the WINS Academy Alumni, the world's first community of practitioners for certified nuclear security professionals.
