The Cyber Insider in the Supply Chain
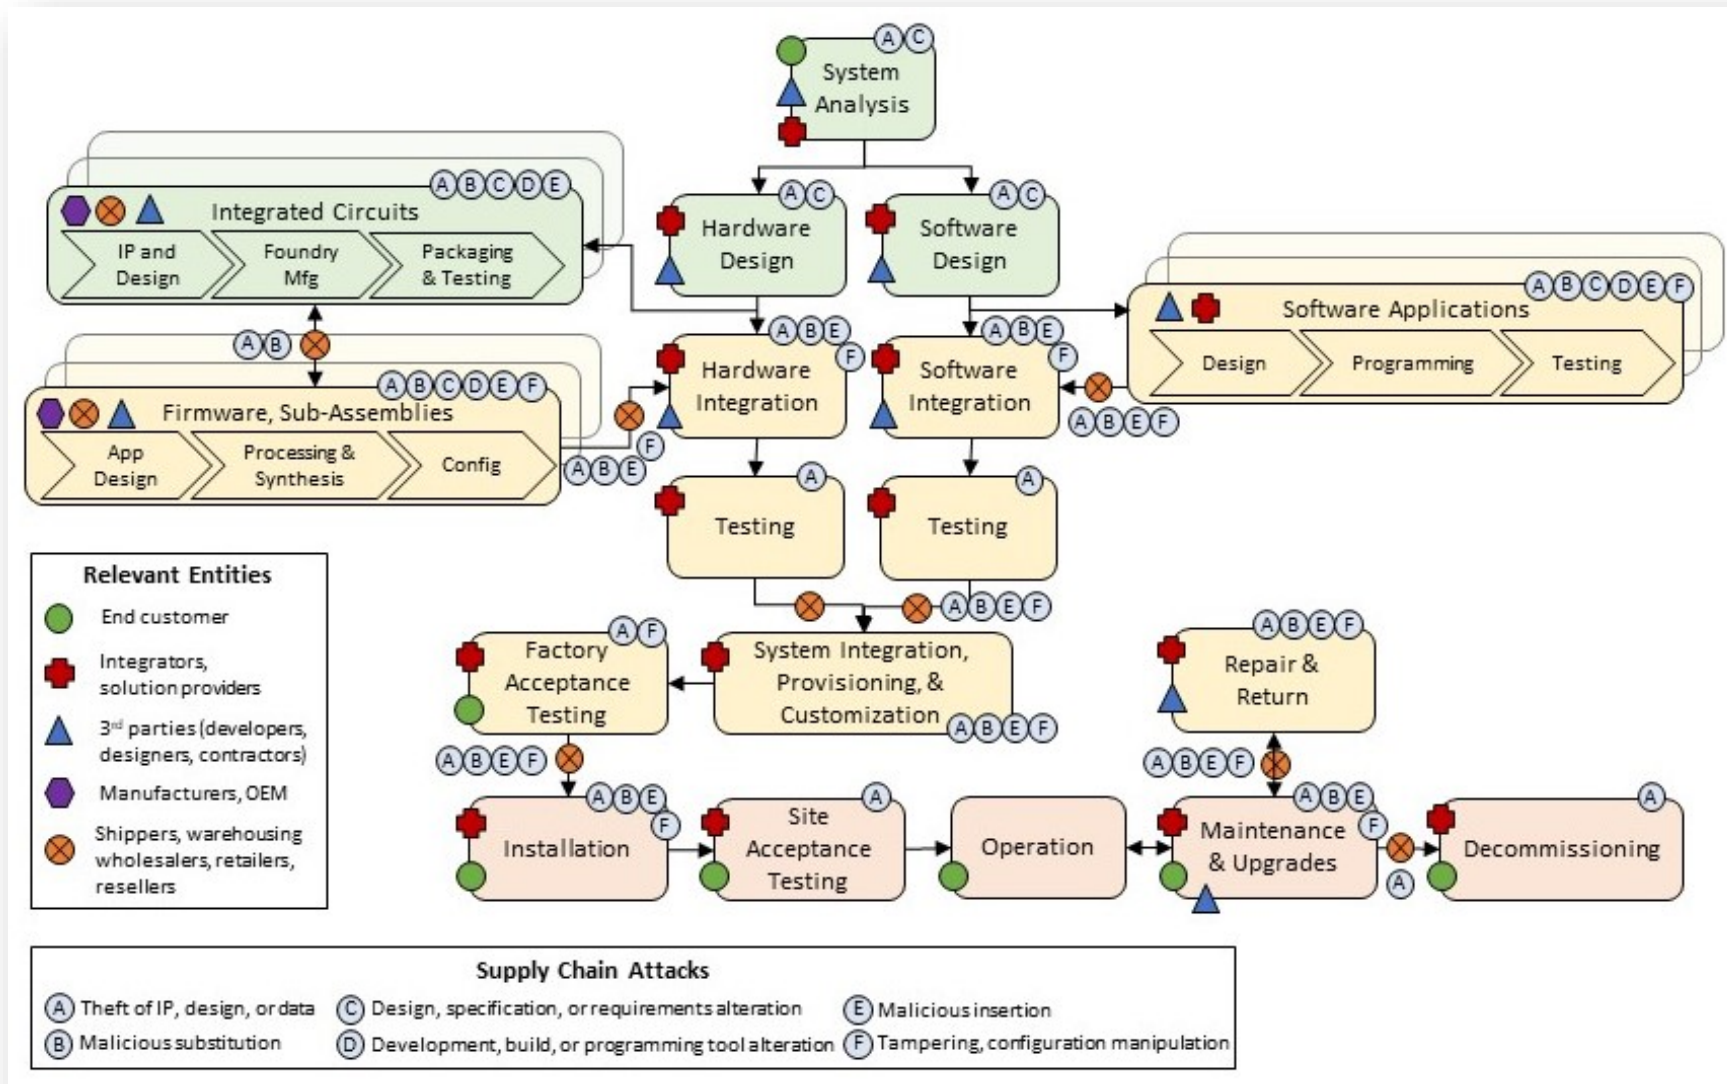

Shannon Eggers, Idaho National Laboratory

WINS International Best Practices Workshop on Mitigating Cyber Insider Threat in the Nuclear Sector
03-05 September 2024

INL/MIS-24-80003

What is the Supply Chain Cyber-Attack Surface?

Image source: IAEA TDL-011

Taxonomy of Supply Chain Cyber-Attack Types

| Attack Type	Description	Publicly Acknowledged Attacks
Theft of IP, design, or data	Unauthorized disclosure of information from a stakeholder who has a trust relationship with the end target, enabling future attacks and/or causing economic loss. This may include but is not limited to intellectual property (IP), design information, operational/configuration data, or stored secrets (i.e., private key, digital certificates).	Stuxnet, Target breach, Duqu 2.0, CCleaner attack
Malicious substitution	Complete replacement of digital technology, including hardware, firmware, and/or software. Hardware clones or counterfeits may not impact all end users depending on the distribution, whereas a substituted software package may compromise all end users even if only a few were targeted.	ShadowHammer, Dragonfly/Havex, Solarwinds Orion (Sunspot), CCleaner attack
Design, specification, or requirements alteration	Unauthorized modification of design, specifications, or requirements that compromises the design stages and results in the purposeful inclusion of latent design deficiencies (e.g., requirements that result in vulnerabilities) or built-in backdoors.	Dual_EC_DRBG random number generator backdoor
Development, build, or programming tool alteration	Unauthorized modification of the development environment, including platform, build and programming tools, with the intent to corrupt the device under development.	Xcode-Ghost, SolarWinds Orion (Sunspot)
Malicious insertion	Addition or modification of information, code, or functionality directly into a device to cause malicious intent, such as impairing or altering device operation or function.	Stuxnet, Target breach, SolarWInds Orion (Sunburst), NotPetya Ransomware, Kaseya (REvil Ransomware)
Tampering, configuration manipulation	Unauthorized alteration or fabrication of configuration, non-executable data, or sending of unauthorized commands with the goal of impacting device operation or function.	SQL Slammer worm

Are any of these Supply Chain Attacks by an <u>Insider</u>?

Stuxnet

Others?

Target POS Breach

Supply Chain Insider Attacks

SolarWinds Orion
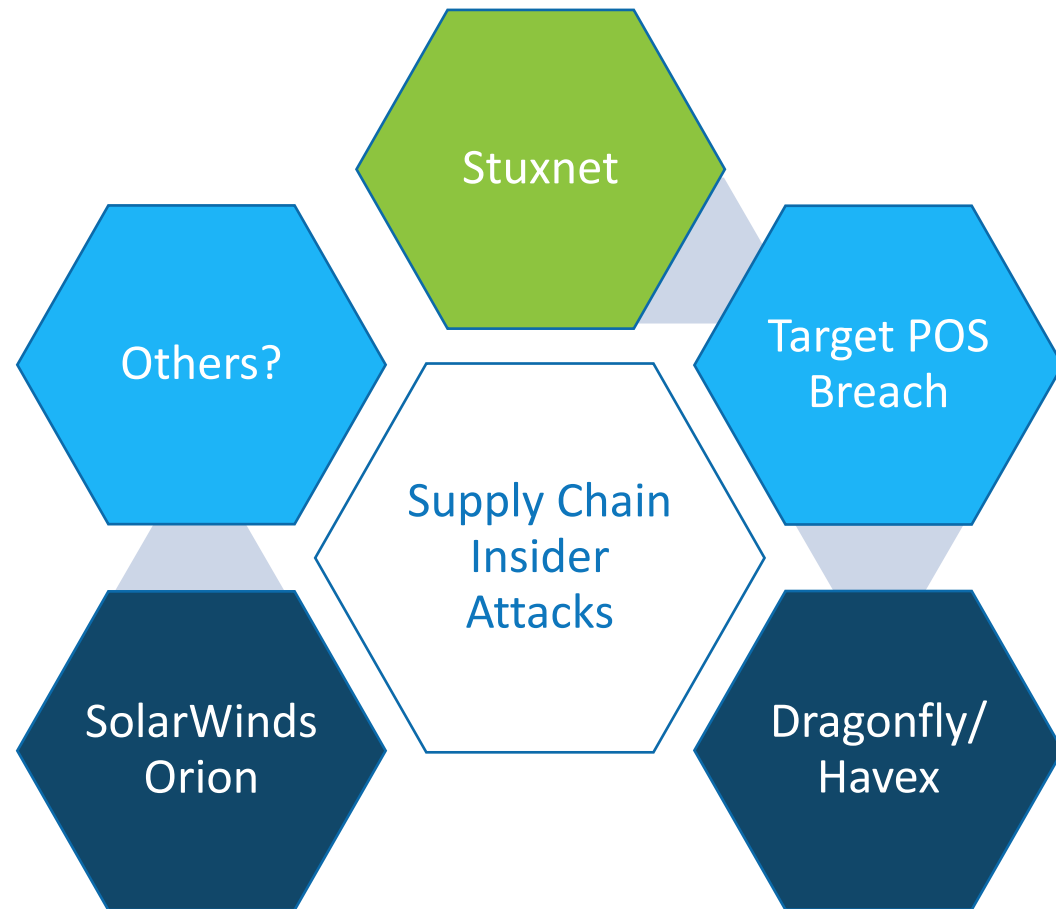

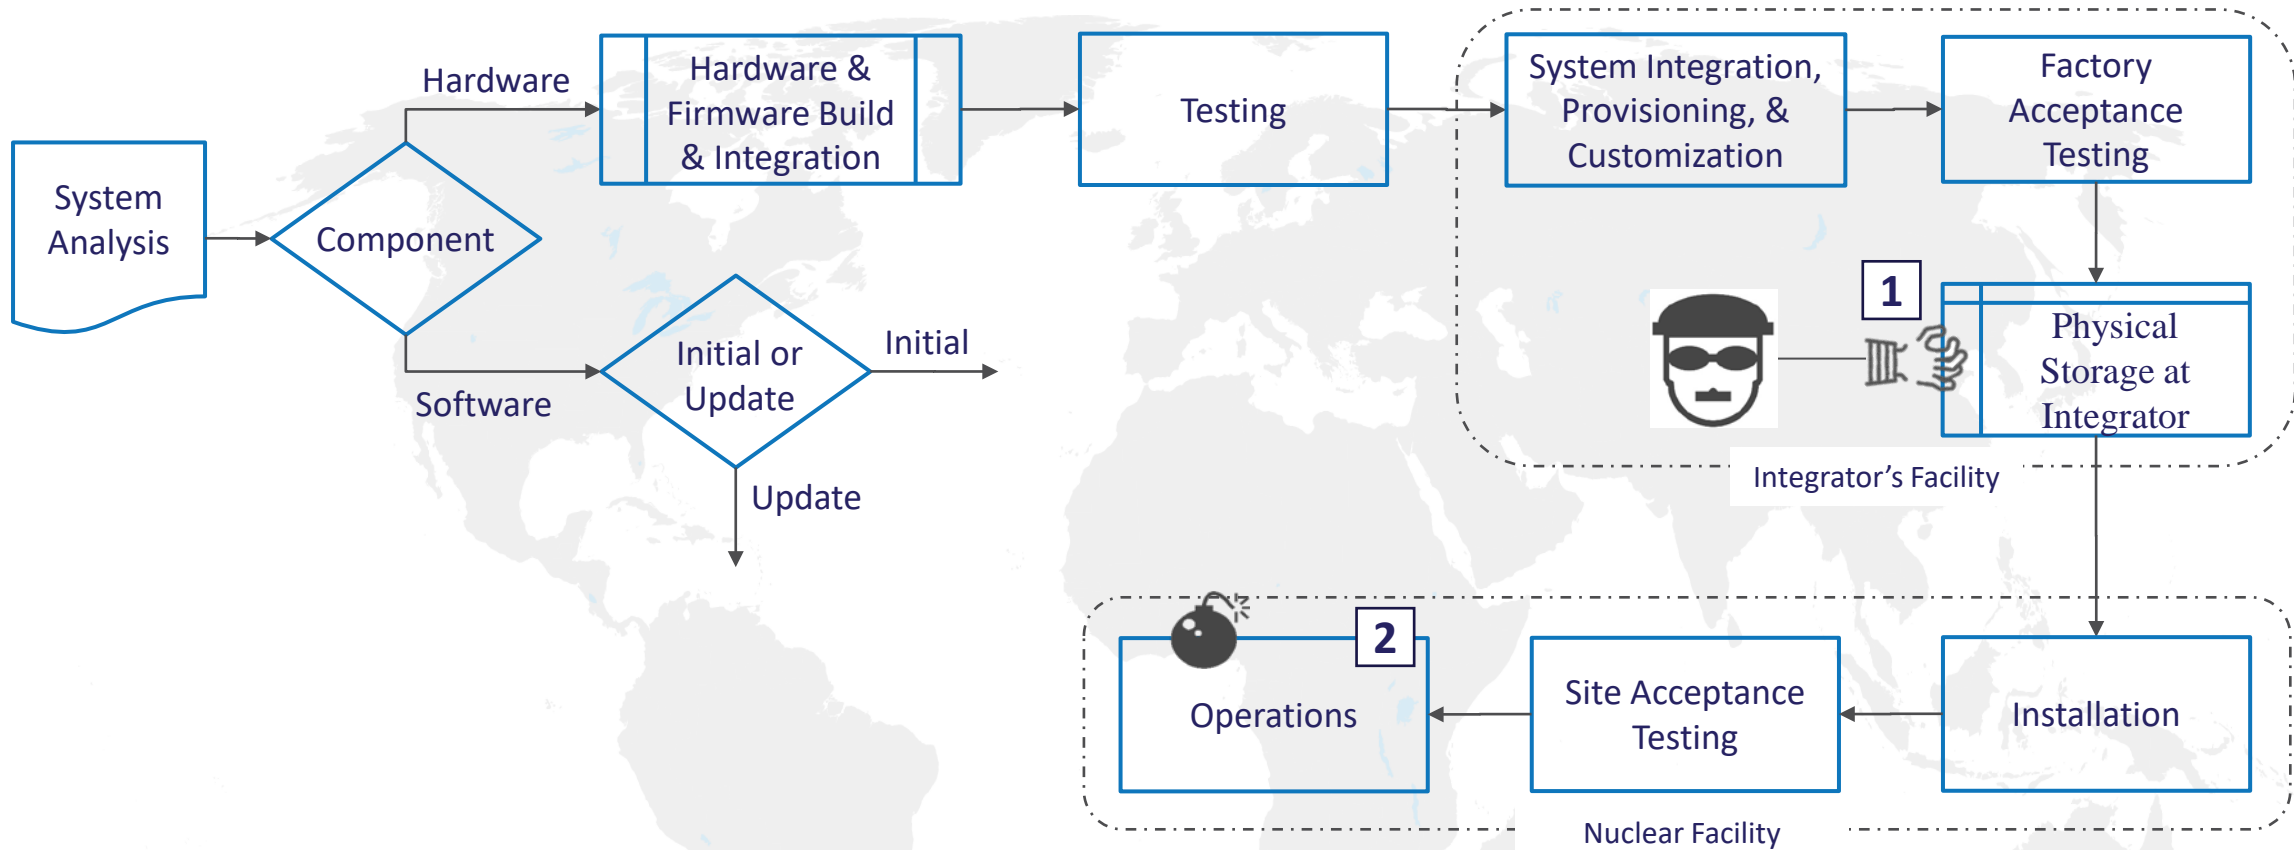

Dragonfly/ Havex

- Stuxnet
  - Malware on air gapped system
  - Stuxnet driver was signed with a valid certificate. Twice.
- Target Point of Sale (POS) Breach
  - 3rd party contractor's credentials were stolen and used for access
- Dragonfly/Havex
  - Vendor websites were compromised
  - Malware was inserted into legitimate software and downloaded by customers
- SolarWinds Orion
  - Sunspot: Deployed in build environment; replaces source file with one with Sunburst malware backdoor
  - Software update included Sunburst; downloaded by customers which then allowed further compromise
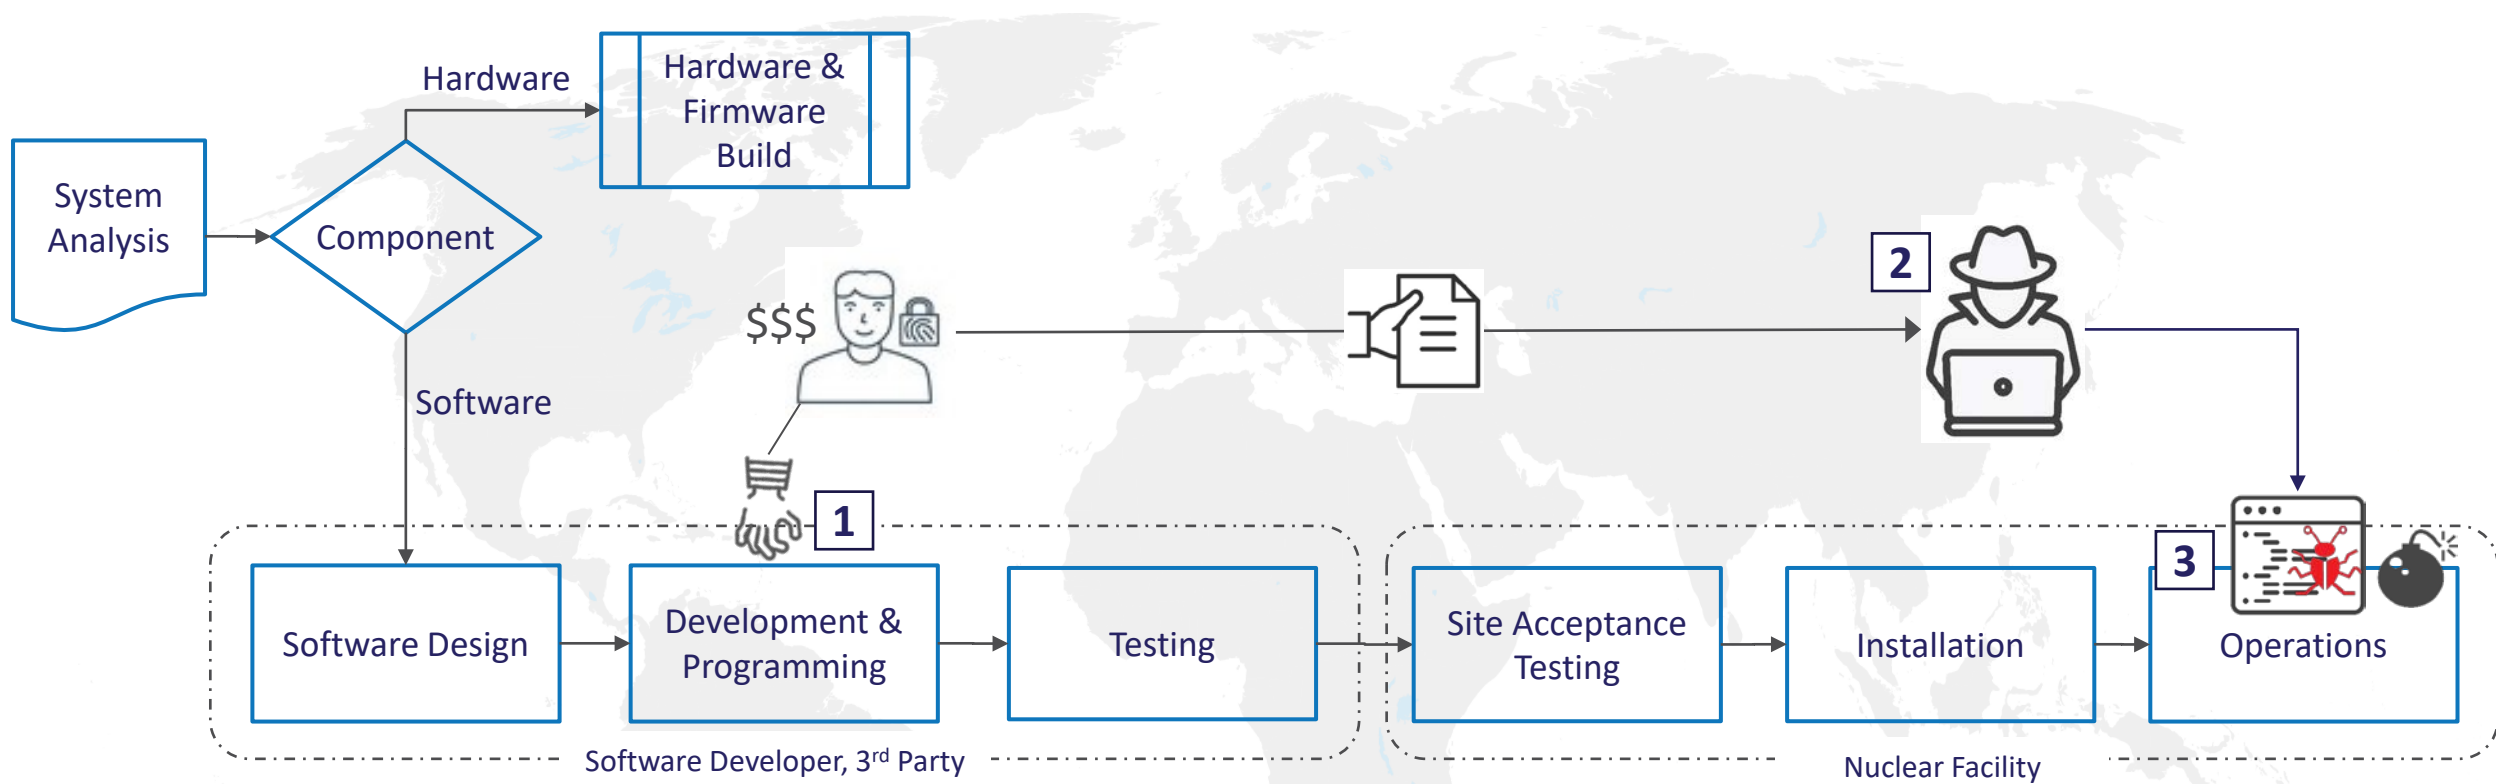

Hypothetical Supply Chain Insider Attack #1— Software Update Compromise

System Analysis → Component
- Hardware → Hardware & Firmware Build
- Software → Initial or Update
  - Initial → Initial Software Build
  - Update → Design → Development & Programming → Testing → Electronic Storage (Software Developer, 3rd Party)

Electronic Storage → Maintenance & Upgrades **3** → Operations **4** (Nuclear Facility)

INS International Nuclear Security
Reducing Risk of Nuclear Terrorism

Mitigations for Insiders in the Supply Chain

- Risk-informed approach: Focus first on the sensitive digital asset (SDA) supply chain

- Map the supply chain: Understand the supply chain attack surface for the SDAs; include service providers

- Establish supplier trustworthiness:

  – Establish and verify supplier security capabilities

    ▸ Understand their insider threat mitigation processes

    ▸ Visit and audit/assess suppliers, if possible (could be 3rd party verification)

  – Maintain approved supplier lists

  – Monitor and review supplier's security periodically
Mitigations for Insiders in the Supply Chain (continued)

- Maintain your own facility's supply chain best practices
  - Establish cyber supply chain risk management (C-SCRM) policies and procedures
  - Include cybersecurity in procurement specifications
  - Perform inspections (supplier, on-receipt, prior to use, etc.)
  - Identify and train employees in C-SCRM
  - Maintain existing programs [e.g., Counterfeit, Fraudulent, Suspect Items (CSFI), Nuclear Quality Assurance (NQA-1), etc.]
  - Maintain detection and response capabilities
- Maintain your own facility's insider threat best practices
